(54) Title: REAL TIME INTERACTION PROCESSING SYSTEM AND METHOD

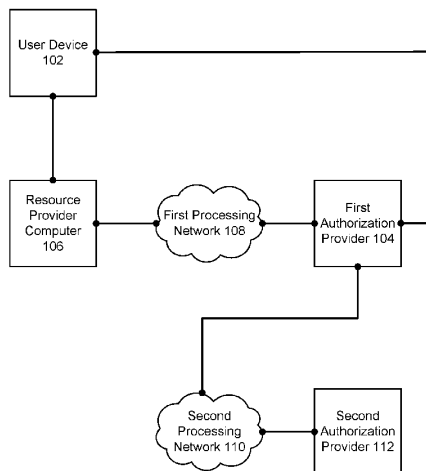

FIG. 1

(57) Abstract: Described herein are methods and systems directed to enabling resource providers to interact with access credentials that the resource provider is typically not capable of interaction with. In some embodiments, a virtual account identifier is issued in association with the access credential, the virtual account identifier being issued by an authorization provider which is different from the authorization provider having issued the access credential. The virtual account identifier may be provided to the resource provider in lieu of the access credential. The resource provider may then generate an authorization request message that includes the virtual account identifier, which may be routed to the authorization provider associated with the virtual account identifier. That authorization provider may then conduct the transaction using the access credential with the authorization provider having issued the access credential.
