

CELL-GROWING CULTURE MEDIUM FOR PRODUCING CULTURED MEAT

ABSTRACT

5 It is an object of the invention to provide culture medium that can cause growth of cells that
are to be used for production of cultured meat, by addition of a food material as an additive. In
culturing of cells using the food component as an additive, addition of egg white or dried egg
white as a cell growth promoting agent has allowed high proliferation potency to be exhibited for
fibroblasts and myoblasts. This finding has led to an invention relating to a cell proliferation
10 medium comprising basal medium and egg white as a cell growth promoting agent.
