

## **Abstract of the Description**

The present invention discloses a speaker enclosure, in particularly a blown molded hollow pressure vessel. The present invention discloses a speaker enclosure, which is formed at once and sealed better. The thickness of the enclosure can be very thin and hence reduce the weight of the speaker. The present invention discloses a speaker enclosure, which can use many of the existing products to replace the traditional speaker enclosure. The present invention discloses a speaker enclosure, which its audible unit directly connects to the blow opening tightly. The present invention discloses a speaker enclosure, which its audible unit is provided with a seal. When the audible unit and speaker enclosure are assembled, the seal and enclosure opening thereby are completely tight assembled together.
