

ABSTRACT

WATERPROOF DEVICE FOR OPENING AND WATERPROOF SHEET FOR
OPENING

5

A waterproof device for an opening includes: a sheet
10 placed over an opening 2, the opening making an interior
and an exterior of a structure 1 communicate and being
opened and closed by an opening/closing member 4; and a
10 holding part 20 that holds the sheet for the structure at a
position exterior of the opening/closing member, wherein
the holding part holds the sheet so that the sheet covers a
predetermined area which is a lower end part in a vertical
direction of the opening/closing member and a part of the
15 structure adjacent to the predetermined area together to
close a lower end area in the vertical direction of the
opening and so that a lower end part 13 in the vertical
direction of the sheet extend along a floor toward the
exterior.
