

SYSTEM AND METHOD FOR CONTROLLING OPERATION OF A METAL-AIR BATTERY

ABSTRACT

A system and method for controlling operation a metal-air battery are provided. A system and method for controlling operation a metal-air battery may include controlling a current drawn from the battery; and controlling a temperature of the battery. A system and method may draw a preconfigured amount of power from a metal-air battery, and draw power from a rechargeable device when power required is greater than the preconfigured power.
