(54) Title: LOGISTICS COMMUNICATION FLOW SYSTEMS AND METHODS

Figure 1

(57) Abstract: The present invention relates to logistics communication flow systems and methods. The method comprises receiving at least one capacity dataset, at least one demand dataset, and at least one conditions dataset and configuring a decision making algorithm based on the at least one capacity dataset, the at least one demand dataset, the at least one conditions dataset. The method further comprises determining at least one prediction data based on the configured decision making algorithm using an artificial intelligence (AI) block, wherein the prediction data corresponds to an on-time prediction, an in-budget prediction, a loss prediction, a contract conversion prediction, a demand volatility prediction, a sustainability prediction and a happiness prediction.
