[Title of the Document] Abstract

To provide a foreign exchange transaction apparatus and the like, where foreign exchange transactions can be carried out with individual currency units.

A foreign exchange transaction apparatus having a control unit for processing information on a foreign exchange transaction of a plurality of currencies is provided with: a screen information generation unit 304 that, by means of the above described control unit, generates screen information for selecting one currency from among the plurality of currencies and placing a bundled order of transactions where the selected currency and the other currencies are exchanged, respectively; a communication unit 301 that transmits, by means of the above described control unit, the above described screen information generated by the screen information generation unit 304 to the outside; and a communication unit 301 that receives, by means of the above described control unit, order information on the above described bundled order from the outside.
