

ABSTRACT

COMPOSITION

The present invention aims to provide a composition which can maintain adhesiveness on the surface even after curing. The present invention relates to a composition comprising the following components (P) and (C) to (E): (P) a polymerizable vinyl compound; (C) a photoinitiator; (D) a dicarboxylic acid diester; and (E) a tackifying agent. The composition may further include (F) a thiol and/or (G) an antioxidant. The polymerizable vinyl compound (P) may preferably contain (A) a polyfunctional (meth)acrylate and (B) a monofunctional (meth)acrylate.
