(54) Title: METHOD AND APPARATUS FOR CREATING A PULSED STREAM OF PARTICLES

(57) Abstract: The present invention is a method of and an appa-
ratus for creating a pulsed stream of particles in a carrier means,
such as air. A pre-metered stream of particles is accumulated in
a pulsing chamber of a pulsing means by interrupting the stream
of particles by a separator means, which interrupts the flow for a
certain portion of the pulse period. The accumulated particles are
the removed from the pulsing means by suction, such as by using
ejector ejectors. The invention is further directed to a kit or pack
of individual absorbent articles which can be produced using the
method and the apparatus.
