

ABSTRACT

Examples of the disclosure relate to a method and apparatus for processing a document, a device, and a medium. The method includes: obtaining document parameter information of a document to be created in response to satisfying a preset online document creation condition; and generating a new target online document based on the document parameter information. The preset online document creation condition includes at least one of the following conditions: a preset document update period is reached, and a target data object is collected through the target online document in the update period; and a size of data in a first online document reaches a preset size of data, or a first online document is determined to fail to completely bear a size of data to be written in a next data collection period or a data collection task. The first online document is a document configured to collect the target data object before the online document creation condition is satisfied. In this way, an online document is created, and data is automatically collected through the online document, such that data collection efficiency is improved.
