(54) Title: PEPTIDE–LIPID CONJUGATES, LIPOSOMES AND LIPOSOMAL DRUG DELIVERY

(57) Abstract

Peptide–lipid conjugates are incorporated into liposomes so as to selectively destabilize the liposomes in the vicinity of target peptidase–secreting cells, and hence, to deliver the liposomes to the vicinity of the target cells, or directly into the cells. The liposomes can thus be used to treat mammals for diseases, disorders or conditions, e.g., tumors, microbial infection and inflammations, characterized by the occurrence of peptidase–secreting cells.
