Abstract of the Disclosure

A free radical solution producing apparatus, which comprises: a feed port (6) in which water is drawn, a dechlorination processing section (1) which
5 produces first water by decomposing chlorine compounds in said water, a magnetic processing section (2) which produces second water by carrying out a process that applies a magnetic field to said first water, a radiation processing section (3) which
10 produces third water by carrying out a process that irradiates a radiation to said second water, an ion exchange section (4) which produces fourth water by carrying out a process that performs an ion exchange for said third water, an electric field applying
15 section (5) which produces fifth water by carrying out a process that applies a strong electric field to said fourth water, and a fifth water intake (7-5) from which said fifth water is obtained, produces water which has the effects of sterilizing and disinfection, and
20 strong cleansing power.
