(54) Title: SYSTEM AND PROCESS TO OPTIMISE EVENT TIME AND SUBJECT SEARCHING AND MATCHING

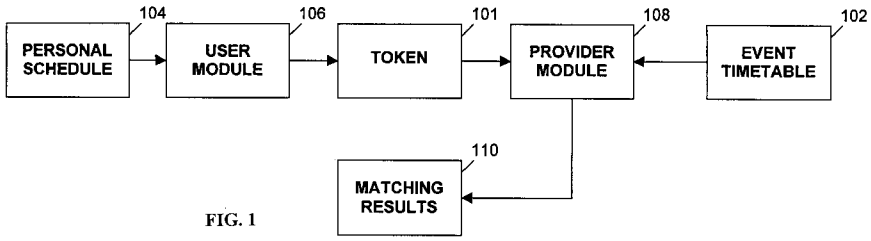

FIG. 1

(57) Abstract: The present invention provides a system and process for data searching and matching over a database. The system and process is suitable for searching and matching events timetable with a personal schedule automatically. A token is generated on the user side based on an existing schedule and optional criteria, and a search engine searches and matches relevant events with the existing schedule and optional criteria. A matched result is returned to the user without revealing the existing schedule.
