(54) Title: DIGITAL BOOK SYSTEM

FIG 1.

(57) Abstract: It is revealed a system and method of obtaining digital book which has the following features: the book scanned by camera will have the same appearance as the physical book (cover, content), the content of the book will be encrypted by the system, that it will be safe of data leak, moreover if the user device is lost, because the file in the book is encrypted, the person trying to retrieve the file in the user device will not be able to read the data, the file can only be read by application suitable for only this invention, during the scanning, the system will automatically read the codes that the book will be arranged automatically based on its physical arrangement, without the user needs to intervene, if the first page is scanned, the book will digitally show the first page, and the next page, although it is scanned the last, the book will be able to be used together by fellow users (shared-usage facility), able for tagging/grouping with special stickers which win later be detected by the system, for premium version, the book is digitally edit-able.
