

WORKPIECE UNIT

ABSTRACT OF THE DISCLOSURE

A workpiece unit includes a wafer, a tape stuck to the wafer, and an annular frame to which an outer circumferential edge of the tape is stuck and which has an opening defined centrally therein. The wafer is disposed in the opening in the annular frame and supported on the annular frame by the tape. An irreversible ultraviolet radiation detecting seal that discolours when irradiated with an ultraviolet radiation as an external stimulus is stuck to the annular frame.
