ABSTRACT

The present application provides a resource transfer method, server, switching device, system and storage medium and belongs to the field of data processing. The method includes: receiving a resource transfer-out request message sent by a server, the resource transfer-out request message including a resource transfer-out request identifier, transfer-out resource account information and a first resource transfer amount; determining a transfer-out management subsystem according to the resource transfer-out request message, the transfer-out management subsystem including a management subsystem for a transfer-out resource account indicated by the transfer-out resource account information; and sending the resource transfer-out request message to the transfer-out management subsystem, the resource transfer-out request message being configured to instruct the transfer-out management subsystem to freeze the first resource transfer amount of resources in the transfer-out resource account, and at least part of the frozen resources being unfrozen and transferred to a transfer-in resource account under a condition that the transfer-out management subsystem receives an account-out request message. The embodiments of the present application can reduce the risk of the resource transfer.
