

COMMUNICATION METHOD AND RELATED APPARATUS

ABSTRACT

This application provides a communication method and a related apparatus. The method is applicable to a terminal device that has obtained a first TA for communicating with a first TRP. The method includes: The terminal device obtains, from a network device, configuration information of a first resource and information indicating to obtain a TA. The terminal device sends, based on the information indicating to obtain a TA, information used to determine a second TA of a second TRP to the network device by using the first resource. The terminal device receives, from the network device, information indicating the second TA. The second TA is used by the terminal device to communicate with the second TRP. Based on solutions in embodiments of this application, accuracy of uplink sending can be improved.
