

ABSTRACT

A system and an information processing method capable of presenting an item for which input is accepted are provided. The system according to an embodiment includes an
5 image interface, an input/output interface, and a processor. The image interface acquires a character string image including a character string. The input/output interface is connected to an input/output device that displays an image and accepts input of an operation. The
10 processor performs character recognition processing on the character string image, sets an item, for which input is accepted, related to the character string based on a result of the character recognition processing, displays an input screen including the character string image and item
15 information indicating the item on the input/output device through the input/output interface, and accepts input of the item through the input/output interface.
