

ABSTRACT

A BATH SHOWER WITH DISPOSABLE FILTRATION UNIT

The present invention provides a shower water filter unit (100) to provide clean
5 treated water substantially free from chlorine, organic contaminants, and suspended
solids by the use of primary filter (112), secondary filter (114) and tertiary filter (116).
The primary filter (112) constructed from polymer type material capable of filtering
particles size of 10 microns and above for eliminating suspended solid. The secondary
filter (114) made of activated balls for chlorine removal. Tertiary filter (116) made of
10 magnetic ceramics balls and mineral stones reside in elongated, hollow internal
chamber of shower head (120) is for water activation.
