SHEET STICKING APPARATUS AND SHEET STICKING METHOD

ABSTRACT OF THE DISCLOSURE

A sheet sticking apparatus 10 includes: a table 13 for supporting an adherend W having adhered surfaces WS at a plurality of sections; a feeding means 11 for feeding a double-sided adhesive sheet A temporarily stuck with a second release liner RL2 to a position facing the adhered surfaces WS; a sticking unit 12 for sticking the double-sided adhesive sheet A to each adhered surface WS; a robot 15 for cutting the double-sided adhesive sheet A stuck to the each adhered surface WS in accordance with the size of the each adhered surface WS; a collecting means 19 for collecting an unnecessary adhesive sheet S1 occurred outside the each adhered surface WS due to the cutting. The feeding unit 11, the sticking unit 12, and the collecting means 19 further include a function for removing the second release liner RL2 which remains on the each adhered surface WS.
