(54) **Title:** SUPRA BOUNDARY WEB COMPOSITOR APPARATUSES, METHODS AND SYSTEMS

FIGURE 7: SBWC SCREENSHOT

(57) **Abstract:** The Supra Boundary Web Compositor Apparatuses, Methods and Systems (SBWC) transforms webpage request inputs via SBWC components into composited expandable element outputs. A top level listening (TLL) component that creates a node list of first level frames is provided. The TLL component executes components provided by a frame busting (FB) component. A first frame obtains a frame escaping (FE) component. The FE component generates a unique frame identifier and creates a second frame that obtains the FB component. The FE component listens for TLL messages, determines a node list identifier of a first level frame, and sends the node list identifier to the FB component. The FB component generates a component that facilitates determining which first level frame contains associated expandable display payload. The FB component listens for FE messages, determines the node list identifier, and generates a component that facilitates rebuilding the expandable display payload in webpage top level.
