

ABSTRACT (FIG. 1)

"ELEVATOR SYSTEM"

5 An elevator system according to one embodiment
includes a hall destination controller (21) installed
in a hall, a DCS controller (11) and a plurality of
elevator controllers (12a, 12b, 12c), If a
failure has occurred a DCS control of the DCS
controller (11), one of the elevator controllers (12a,
12b, 12c), . . . which is set as a master in advance
10 converts a first call signal of a DCS system which is
output from the hall destination controller (21) into a
second call signal to be used in a group management
control system, and continues an operation.
