

CONVEYING MECHANISM

ABSTRACT

There is provided a conveying mechanism disposed in a processing apparatus. The conveying mechanism conveys a workpiece from a holding table to a cleaning mechanism. The conveying mechanism includes a holding part that holds the workpiece, a cover part that covers an opening of a casing of the cleaning mechanism, a movement unit that moves the holding part and the cover part integrally relative to the cleaning mechanism, and a gas jet mechanism that jets gas toward the cover part to prevent liquid from adhering to the cover part.
