

A RESCUING AND CARRYING DEVICE

ABSTRACT

A rescuing and carrying device comprises a supporting portion (1) made of flexible materials, handhold belts (2) made of flexible materials, safety belts (3) made of flexible materials and shoulder belts (5) made of flexible materials. The handhold belts (2), the safety belts (3) and the shoulder belts (5) are fixed on the supporting portion (1) respectively. With being made of flexible materials, the rescuing and carrying device is light and can be folded into smaller one. Additionally, it is convenient for storing and using on battle field or at home. Furthermore, the rescuing and carrying device can be stored under the mattress when not in use and be used as rescuing tools when emergency by fastening the safety belt, especially suitable for battle field or countryside hospital and clinics. With shoulder belts, the present rescuing and carrying device can be lifted or carried on the shoulders of the carriers. It increasingly reduced the possibility of hurt on the carrier's waists, backbones and hands which are resulted from operating only by hands, but the carriers can free their hands to deal with other emergency event.
