(54) Title: A SYSTEM AND METHOD FOR MANAGEMENT OF THE PRODUCTION OF PRINTED MATERIAL

(57) Abstract: The present invention ensures that content provided in formatted print pages is current, and can provide a convenient user interface to identify portions of a display screen to monitor for changes in content. Alternatively, the invention can monitor data storage locations for changes in content, or be informed by a content provider of changes in content. Moreover, the invention preferably registers a flag or other setting when a change is recognized, and can further automatically take action based upon an evaluation of the change. Alternatively, a website (or other course material provided on a communication network) is automatically displayed for a user to determine whether any actions are warranted. Thus, changes in content are, preferably, regularly monitored and registered.
