

ABSTRACT

A compound represented by formula (1) or a salt thereof, or an N-oxide thereof. [In formula (1), X_1 represents an oxygen atom, a sulfur atom, NY_1 , or $C(J_5J_6)$, n represents 0 or 1, J_1 - J_4 each represent a hydrogen atom, a halogen atom, a (halo)alkyl group, an alkoxy group, a hydroxy group, or a group that is obtained as a result of combining of two bonds of $C-J_1$ and $C-J_2$ or $C-J_3$ and $C-J_4$ and that is selected from the group consisting of an O atom in a carbonyl group, an S atom in a thiocarbonyl group, an imino group, and a methylene group, D represents a group selected from the group consisting of a phenyl group and a heterocyclic group, B represents a structure represented by any one of B-1 to B-6 and B-8, R_{12} represents a group selected from the group consisting of (halo)alkyl groups and halo(C_3 - C_6) cycloalkyl groups, m represents 0, 1, or 2, G_2 represents a nitrogen atom or $C(R_2)$ and G_4 represents a nitrogen atom or $C(R_4)$, but one or both of G_2 and G_4 are nitrogen atoms, G_5 represents a nitrogen atom or $C(R_5)$, G_6 represents a nitrogen atom or $C(R_6)$, G_7 represents a nitrogen atom or $C(R_7)$, and G_8 represents a nitrogen atom or $C(R_8)$].
