

TITLE:

DIGITAL CONTENT GENERATION METHOD AND DIGITAL CONTENT
GENERATION SYSTEM

5

ABSTRACT

A digital content generation method and a digital content generation system are disclosed. The method includes: establishing a style description database; obtaining identity identification data corresponding to a target user; obtaining style description data corresponding to the target user from the style description database according to the identity
10 identification data; and affecting an output of an artificial intelligence model by using the style description data, enabling the artificial intelligence model to generate a digital content having a specific style.
