(54) Title: ELECTRICAL CONNECTOR FOR A HIGH CAPACITY MEMORY CARD

(57) Abstract: The invention provides an electrical connector (50) of the type comprising a support (52) for an SD-type contact memory card having a series of conducting pads (Pi) on its lower main face (76), in a non-regular transverse distribution, and each of which engages with an electrical contact blade (100) which is carried by the support and which belongs to a series of longitudinal parallel blades (100), and of the type in which each free end (102) of a blade defines with the corresponding conducting pad (Pi) a contact point, at least two contact points being longitudinally offset with respect to the other, characterized in that all the contact blades (100, 102) are identical and arranged with a constant transverse pitch compatible with the distribution of the conducting pads (Pi) on the card, as to allow the said blades to be fitted in a single insertion operation.
