(54) Title: IMPROVEMENTS IN OR RELATING TO WORK STATIONS**(57) Abstract**

A work station which includes a chair and means to support pieces of equipment such as a personal computer, a printer and the like. The station has at least two upright stanchions (4, 5) which project upwardly in a substantially parallel manner from a base (6). Sleeves (e.g. 8a) are engaged on the stanchions and the sleeves can act as spacers. Support members for the pieces of equipment are attached individually or in combination to a sleeve or sleeves so the support members will extend from the sleeves in a direction substantially normal to the longitudinal axis of the stanchions. The chair is supported between the stanchions at the desired height by being attached to the sleeves which are engaged on the stanchions. The work station can also include an electrical power reticulation system, a sound system and a lighting arrangement.
