(54) Title: A SAFETY MECHANISM FOR A COCONUT SCRAPER

Figure. 2

(57) Abstract: Present disclosure discloses a safety mechanism for a coconut scraper (100). The coconut scraper(100) includes a tool assembly (103) coupled to a motor (106) and configured to displace between a first position and a second position, a bowl (102) receiving the tool assembly (103) and a lid (108) receivable by the bowl (102), which is operable between an open condition and a closed condition. The safety mechanism includes a first activation unit (107) and second activation unit (116), each communicatively coupled to the motor (106). The second activation unit (116) is configured to activate, when the lid (108) is operated to the closed condition and the first activation unit (107) is configured to activate, when the tool assembly (103) is displaced to the second position. The activation of the first activation unit (107) and the second activation unit (116) powers the motor (106), thus ensuring safety of the user, since the motor (106) is powered only when the lid (108) is operated to closed condition and the tool assembly (103) is displaced
