

ABSTRACT

The present disclosure relates to a polarization indication method and apparatus, a polarization determination method and apparatus, a communications apparatus, and a storage medium. The polarization indication method comprises: sending first indication information to a terminal, wherein the first indication information is used for indicating a target polarization mode used by communication between the terminal and a satellite in a non-terrestrial network. According to the present disclosure, after determining the target polarization mode, the base station may generate the first indication information indicative of the target polarization mode, and send the first indication information to the terminal, so that the terminal determines, according to the first indication information, the target polarization mode used by the communication with the satellite in the non-terrestrial network and thus communicates with the satellite by using the target polarization mode; when the terminal is prevented from communicating with the satellite, the polarization mode adopted by the terminal is different from a polarization mode adopted by the satellite, and good communication is ensured between the terminal and the satellite.
