MANAGEMENT SYSTEM AND GAMING CURRENCY

Abstract

The object of the present invention is providing a management system configured to manage a gaming currency using an EM wire member and a RFID part.

A management system (40) is a management system configured to manage a gaming currency (100) to be used for betting in a game in a casino and has a configuration wherein the gaming currency (100) includes a built-in EM wire member (131) and a built-in RFID part (141) configured to store information, the management system (40) comprises: a gate (41) including an EM detecting system (42) configured to detect presence of the gaming currency (100) possessed by a passing person passing therethrough by detecting presence of the EM wire member (131); and an RFID reading system (47) configured to read the information from the RFID part (141), and the RFID reading system (47) is configured to: read the information from the RFID part (141) of the gaming currency (100) declared by the passing person; or read the information from the RFID part (141) of the gaming currency (100) detected by detecting the EM wire member (131) by the EM detecting system (42).
