Generate a fixed search wrapper in a page or a window pre-determined by a browser, with the page or the window nested within the search wrapper
S101
When a user selects a first search engine of the browser to search, display the search wrapper in a search results page of the first search engine, and display other search engine options for searching in the search set
S102
When the user needs to switch search engine to repeat the search, repeat the search using current search keywords through a second search engine selected by the user from the other search engine options
S103
