INFORMATION PROCESSING SYSTEM, INFORMATION PROCESSING METHOD AND STORAGE MEDIUM

[ABSTRACT]

Provide are an information processing system, an information processing method, and a storage medium that can efficiently register a plurality of pieces of biometric information capable of realizing highly accurate biometric authentication. An information processing system includes: a registration unit that registers a first biometric information acquired by a first terminal; and an acquisition unit that acquires a target biometric information to be matched with the first biometric information, wherein the registration unit registers a second biometric information acquired by a second terminal different from the first terminal when the target biometric information is acquired in association with the first biometric information according to matching result of the target biometric information with the first biometric information.
