~~What is claimed is:~~CLAIMS

~~1. A game management system for managing a casino game played on a gaming table of a casino facility, comprising:~~

~~an information processing device which specifies a bet amount at each player position on a gaming table on the basis of positions, types, and the number of bet gaming tokens;~~

~~a player number determination device which determines the number of players participating in a game on the gaming table; and~~

~~a management control device which determines a recommended value of the minimum bet amount for each gaming table on the basis of information on the bet amount specified by the information processing device and information on the number of players determined by the player number determination device.~~

~~2. The game management system according to claim 1, wherein the management control device is configured to be capable of determine transition of the bet amount in a plurality of games at each player position.~~

~~3. The game management system according to claim 2, further comprising:~~

~~a game result determination device capable of determining a result of a game,~~

~~wherein the management control device is configured~~

~~to be capable of determining a win and loss and an income and expenditure at each player position on the basis of the information on the bet amount specified by the information processing device and information on the result of the game determined by the game result determination device.~~

~~4. The game management system according to claim 3, wherein the management control device determines the recommended value of the minimum bet amount for each gaming table on the basis of the information on the transition of the bet amounts at each player position or the transition of the income and expenditure at each player position.~~

~~5. The game management system according to claim 1, wherein the management control device includes a function of determining a congestion degree of each area within the casino facility on the basis of the information on the number of players determined by the player number determination device, and determining the recommended value of the minimum bet amounts for each gaming table of each area depending on the congestion degree.~~

~~6. The game management system according to claim 5, wherein the management control device includes a function of determining the recommended value of the minimum bet amount divided into a plurality of stages on the basis of information on the number of players determined by the~~

~~player number determination device and information on the lowest amount among the bet amounts at each player position or information on an average bet amount.~~

~~7. The game management system according to any one of claims 1 to 6, wherein the management control device includes a function of increasing the recommended value of the minimum bet amount when the players betting an amount equal to or more than a predetermined ratio with respect to the minimum bet amount for the gaming table is a predetermined ratio or more.~~

~~8. The game management system according to claim 5, wherein the management control device includes a function of determining the number of gaming tables that are opened in the casino facility, and determining the recommended number of gaming tables to be opened in each area depending on the congestion degree.~~

~~9. The game management system according to claim 5, wherein the management control device includes a function of recording the transition of the congestion degree, and determining the recommended number of gaming tables to be opened in each area on the basis of the recorded information on the transition.~~

~~10. The game management system according to claim 5,~~

~~further comprising:~~

~~a player identification unit which identifies a player participating in a game on the gaming table,~~

~~wherein the management control device includes a function of associating information on each player identified by the player identification unit with bet amounts at each player position identified by the information processing device and storing the associated data in a database and a function of determining the recommended number of gaming tables to be opened in each area on the basis of information on the past bet tendency of each of the players.~~

~~11. The game management system according to claim 1, wherein the management control device determines the minimum bet amount of a newly opened gaming table on the basis of the minimum bet amount for the gaming table around the newly opened gaming table.~~

~~12. The game management system according to claim 1, wherein the management control device determines the minimum bet amount of a newly opened gaming table on the basis of the bet amount specified by the information processing device for the gaming table around the newly opened gaming table.~~

~~13. The game management system according to claim 1,~~

~~wherein the management control device manages the number of dealers and determines whether or not to newly open a gaming table on the basis of the number of dealers under management.~~

~~14. The game management system according to claim 9, wherein the management control device changes the minimum bet amount for the gaming table around a newly opened gaming table as the gaming table is newly opened.~~

~~15. The game management system according to any one of claims 1 to 14, wherein the management control device determines the recommended value of the minimum bet amount for each gaming table so as to increase a profit ratio to sales.~~

~~16. The game management system according to any one of claims 1 to 14, wherein the management control device determines the recommended value of the minimum bet amount for each gaming table so as to increase the number of games per unit time or an average value of the total bet amounts per game.~~

~~17. The game management system according to any one of claims 1 to 14, wherein the management control device determines the total bet amount of each player for each game and/or each predetermined time or period for each of~~

~~the gaming tables, and determines the recommended value of the minimum bet amount for each gaming table.~~

~~18. The game management system according to any one of claims 1 to 14, wherein the management control device manages the plurality of gaming tables, determines the total bet amount of each player for each game and/or each predetermined time or period in units of the plurality of gaming tables, and determines the different recommended value of the minimum bet amount for each of the plurality of gaming tables.~~

~~19. The game management system according to any one of claims 1 to 14, wherein the management control device manages the plurality of gaming tables, determines the total bet amount of each player for each game and/or each predetermined time or period in units of the plurality of gaming tables, and determines the recommended value of the minimum bet amount for the newly opened gaming table.~~

~~20. The game management system according to any one of claims 1 to 14, wherein the management control device manages the plurality of gaming tables, determines information on at least one item of the number of the players, the bet amount, or the concentration or dispersion of the number of players in the units of the plurality of gaming tables, and determines the recommended value of the~~

~~minimum bet amount for each gaming table on the basis of the information.~~

~~21. The game management system according to claim 1, wherein the player number determination device determines the number of players based on information of the players identified by a facial image.~~

~~22. The game management system according to claim 1, wherein the player number determination device determines the number of players based on information of the players identified by a membership card.~~

~~23. The game management system according to claim 1, wherein the player number determination device determines the number of players based on information of the bet gaming tokens.~~

~~24. The game management system according to claim 1, wherein the player number determination device determines the number of players based on information of positions of bet gaming tokens.~~

~~25. The game management system according to claim 1, wherein the information processing device works as the player number determining device.~~

1. A game management system for managing casino games

played at a game table of a casino facility, comprising:

an information processing device that identifies bet amount for each player position at the game table based on positions, types and a number of gaming chips that have been bet;

a player count determination device that determines a number of players participating in the game at the game table;

a management control device that determines a recommended minimum bet amount for each game table based on information of the bet amount identified by the information processing device and the number of players determined by the player count determination device.

2. The game management system according to claim 1, wherein the management control device is configured to be able to grasp a transition of the bet amounts for each player position in a plurality of games.

3. The game management system according to claim 2, further comprising a game result determination device capable of determining game results,

wherein the management control device is configured to be able to ascertain a win/loss and balance for each player position based on the information of the bet amount information identified by the information processing device and the information of the game result determined by the

game result determination device.

4. The game management system according to claim 3, wherein the management control device determines the recommended minimum bet amount for each game table based on information of the transition of bet amounts for each player position or a transition of income and expenditure for each player position.

5. The game management system according to claim 1, wherein the management control device is capable of ascertaining a level of congestion in each area within the casino facility based on information on the number of players determined by the player count determination device, and of determining the recommended minimum bet amount for each game table for each area in accordance with the level of congestion.

6. The game management system according to claim 5, wherein the management control device is equipped with a function for determining the recommended minimum bet amount in multiple levels based on the information on the number of players determined by the player count determination device and information on the minimum bet amount or average bet amount for each player position.

7. The game management system according to any of claims

1 to 6, wherein the management control device is equipped with a function to increase the recommended minimum bet amount when a player bets more than a predetermined percentage of the minimum bet amount on the game table.

8. The game management system according to claim 5, wherein the management control device is capable of ascertaining the number of open game tables in the casino facility and is equipped with a function for determining the recommended number of game tables to be opened for each area according to the congestion level.

9. The game management system according to claim 5, wherein the management control device can record a transition of the congestion level for each area, and is equipped with a function to determine a recommended number of game tables to be opened for each area based on information of the recorded transition.

10. The game management system according to claim 5, further comprising a player identification device that identifies players participating in the game at the game table,

wherein the management control device is provided with a function for storing in a database information of each player identified by the player identification device in association with the bet amount of each player position

identified by the information processing device, and for determining the recommended number of game tables to be opened for each area based on information of past betting tendencies of each player.

11. The game management system according to claim 1, wherein the management control device determines a minimum bet amount for a newly opened game table based on the minimum bet amounts for game tables around the game table.

12. The game management system according to claim 1, wherein the management control device determines a minimum bet amount for a newly opened game table based on the bet amounts identified by the information processing device for game tables around the game table.

13. The game management system according to claim 1, wherein the management control device manages a number of dealers and determines whether or not to open a new game table based on the number of the dealers managed.

14. The game management system according to claim 9, wherein the management control device, as a game table is newly opened, changes the minimum bet amount of the game tables around the newly opened game table.

15. The game management system according to any of claims

1 to 14, wherein the management control device determines the recommended minimum bet amount for each game table so as to increase the profit-to-sales ratio.

16. The game management system according to any of claims 1 to 14, wherein the management control device determines the recommended minimum bet amount for each game table so as to increase an average number of games per unit time or an average total bet amount per game.

17. The game management system according to any of claims 1 to 14, wherein the management control device ascertains a total bet amount per game and/or per predetermined time or period for each player for each game table, and determines the recommended minimum bet amount for each game table.

18. The game management system according to any of claims 1 to 14, wherein the management control device manages a plurality of the game tables, ascertains a total bet amount per player per game and/or per predetermined time or period in units of the plurality of game tables, and determines a different recommended minimum bet amount for each of the plurality of game tables.

19. The game management system according to any of claims 1 to 1 4, wherein the management control device manages a plurality of the game tables, ascertains a total bet amount

per player per game and/or per predetermined time or period in units of the plurality of game tables, and determines the recommended minimum bet amount for a newly opened play table.

20. The game management system according to any of claims 1 to 14, wherein the management control device manages a plurality of the game tables, ascertains, for each of the plurality of the game tables, information on at least one item of the number of players, the bet amount, or concentration or dispersion of the number of players, and determines, based on the information, a recommended minimum bet amount for each the game table.
