

SECURITY VERIFICATION METHOD AND APPARATUS

ABSTRACT

Embodiments of this application disclose a security verification method and apparatus. The method includes: receiving a first command sent by a network device, where the first command includes a first value, and the first command is one of a select command, a query command, a query repeat command, a query adjust command, or an acknowledgment command; determining a first response value based on the first value and a security key; and sending a first request, where the first request includes the first response value, and the first response value is used by a verification function to verify a terminal device. According to embodiments of this application, communication security can be ensured.
