(54) Title: CELL OFF INDICATION VIA DOWNLINK CONTROL INFORMATION

FIG. 2

(57) Abstract: The present disclosure relates to a solution on cell off indication via DCI. In particular, a group common DCI format is used to indicate an activation/deactivation of the cell off for entering NES mode. DCI in the group common DCI format may include separate bits for a first indication regarding the activation/deactivation of the cell off for entering NES mode and a second indication regarding the activation/deactivation of cell DTX/DRX. Alternatively, the DCI may include common bits for the first and second indications with a flag to indicate which indication. In this way, the cell off for entering NES mode can be indicated more efficiently.
