(54) Title: HUMAN BODY SUPPORT STRUCTURE

(57) Abstract: A human body support structure (26) which provides a crossed series of cords (28, 32) mounted within an enclosed space (24) formed by a rigid frame (20). Mounted on each of the cords are pins (30) with a longitudinal axis of the pins being oriented perpendicular to the cords. Located between directly adjacent pins is a spacer (44) with each spacer being mounted on a cord. The cords are slightly stretchable assuming a taut relationship when mounted relative to the frame. A human body is to be placed against and supported on the upper surface of the pins, as shown in Figure 1.
