(54) Title: PARTS WASHER

(57) Abstract: A parts washer (10) comprises a cabinet (12), a platform (14), a liquid distributor (16), a coupling (18), and a drive system (20). The platform (14) is disposed inside the cabinet (12) and supports articles that are required to be cleaned. The distributor (16) is disposed inside the cabinet to one side of the platform and has one or more outlets (26) that direct the liquid in a generally radial direction toward the platform (14). The coupling (18) couples the distributor (16) to an inside of the cabinet (12) in a manner allowing at least 2° of freedom of motion of the distributor (16). More particularly, the coupling (18) allows the distributor (16) to move in a complex motion comprising a combination of tilting, rotation and up and down motion.
