Abstract

A device for automatically receiving an umbrella in a bag

The present invention relates to a device for automatically receiving a wet umbrella in a bag which is installed at the entrances of, for example, hotels, stores, and so on and relates to a bag for receiving an umbrella which is used in the device, and its object is to provide a device for receiving an umbrella in a bag which is simply arranged and surely takes an umbrella in the receiving bag.

The present invention, in which the receiving bag (4) of the umbrella (U) is loaded within the main body and an opening operation member (20) for opening an insertion opening (4a) of the above-described receiving bag (4) is provided, is arranged so that the insertion opening (4a) of the above-described receiving bag (4) is opened by rotating the opening operation member (20) with a point of the umbrella.

As a result, an umbrella can be automatically and easily taken in the bag without using a motor and so on, so that the present invention can provide an extremely practical device which can be used where there is no electric power source as well as can reduce the manufacturing cost, without possibilities that an electric cord will become a hindrance and that an electric leak will occur.
