

ABSTRACT

The present disclosure relates to a connection establishment method and apparatus. The connection establishment method comprises: in response to receiving connection-related information of a remote device, determining, according to the connection-related information, a reason for a relay device performing connection establishment or connection recovery with a base station, wherein the connection-related information is used for indicating a connection request of the remote device. By means of the present disclosure, a base station can accurately determine, according to a reason for a relay device performing connection establishment or connection recovery, a reason for a remote device performing a communication operation, which is conducive to the base station accurately making a decision of allowing the relay device to perform connection establishment or connection recovery, or a decision of refusing to allow the relay device to perform connection establishment or connection recovery.
