(54) Title: CRT HAVING A FOCUS MASK WITH PARTIALLY CONDUCTIVE INSULATOR

162162

(57) Abstract: The invention is a color cathode-ray tube (10) comprising a focus mask (25) having a plurality of spaced-apart first conductive strands (40). Each of the first conductive strands has a substantially continuous insulating material layer (62) formed on a screen-facing side thereof, wherein the insulating material layer is partially slightly conductive to an extent sufficient to prevent an accumulation of a significant electrical charge. A plurality of second conductive wires (60) are oriented substantially perpendicular to the plurality of first conductive strands and are bonded thereto by the insulating material layer.
