ARTICLE TRANSPORT SYSTEM

ABSTRACT OF THE DISCLOSURE

An article transport system 100, in which an article B is transported between an article storage unit 1 storing the article B at a first temperature and an external space 2 at a second temperature higher than the first temperature, includes: a lifter 3 which transports the article B in a vertical direction Y; a cover part 4 with which a transport route of the lifter 3 is covered; a first loading and unloading port 11 provided in the cover part 4 to open to the side of the article storage unit 1; and a second loading and unloading port 12 provided in the cover part 4 to open to the side of the external space 2. The first loading and unloading port 11 is placed on an upside Y1 above the second loading and unloading port 12, and the lifter 3 transports the article B between the first loading and unloading port 11 and the second loading and unloading port 12.
