(54) Title: INFUSION BAG WITH INTEGRATED RINSING SYSTEM

(54) Titre : POCHE DE PERFUSION AVEC RINCAGE INTEGRE

(57) Abstract: The invention relates to a medical bag which is intended for the infusion of a medicament by means of gravity. The inventive bag comprises: at least two compartments, namely a first compartment (1) containing a medicament in the form of a solution and a second compartment (2) containing a rinsing solution; and means for separating/communicating the compartments, which prevent the rinsing solution from automatically entering the medicament compartment except at the end of the infusion period. The rinsing solution ends the infusion, by rinsing the medicament bag and the infusion line, such as to prevent any risk of contamination or the leakage of residual medicament from the bag or line.

(57) Abrégé : La présente invention concerne une poche à usage médical pour perfusion d'un médicament par gravité, comportant au moins 2 compartiments, l'un (1) contenant un médicament sous forme d'une solution et l'autre (2) un soluté de rinçage et des moyens de séparation/communication des compartiments ne permettant au soluté de rinçage de pénétrer automatiquement dans le compartiment contenant le médicament qu'en fin de perfusion. Le soluté de rinçage termine la perfusion donc rince la poche de médicament et la ligne de perfusion, permettant ainsi de supprimer les risques de contamination et la perte du médicament résiduel de la poche et de celui contenu dans la ligne de perfusion.
