PATENT

USE OF 2-AMINO-4-PYRIDYLMETHYL-THIAZOLINE DERIVATIVES AS INHIBITORS OF INDUCIBLE NO SYNTHASE

AVENTIS PHARMA S.A.

ABSTRACT

The present invention relates to the use of 2-amino-4-pyridylmethyl thiazoline derivatives of formula (I)

(I)

in which

either R₁ = R₂ = Cl, or (C1-C4)alkyl or hydroxyl; or (C1-C4)alkoxy

or at least one of the two, R₁, R₂, is hydrogen and the other is a (C1-C4) alkyl radical, a hydroxyl, a (C1-C4)alkoxy or a chlorine

or their pharmaceutically acceptable salts as inhibitors of inducible NO synthase.
