

ABSTRACT OF THE DISCLOSURE
VIBRATIONALLY FLUIDLY STIRRING APPARATUS

A vibrationally fluidly stirring apparatus includes tank (13) to be charged with liquid (LIQ) to be stirred; a
5 vibration generating portion containing vibration motor (14);
vibration absorbing member (3) disposed between the tank (13)
and the vibration generating portion; a vibrating bar (7)
operationally connected to the vibration generating portion and
extended in the tank (13); and a vibration vane (10) attached to
10 the vibrating bar (7), the vibration absorbing member (3) is a
laminate of upper metal plate (1), rubber plate (2) and lower
metal plate (1').
