(54) Title: SELECTIVE CALL TRANSCEIVER WITH CUSTOMIZED CANNED MESSAGES

(57) Abstract

An SCT (Selective Call Transceiver) (10) includes a memory (54) which stores a list (60) of addressees with whom the SCT user normally communicates. The memory also stores, for each of selected addressees, an associated group (62) of customized messages. The SCT (10) has a processor (18) that is programmed to permit the user to easily choose a customized message to be sent to an addressee, either by way of replying to a previously received message or by initiating transmission of a new communication.
