(54) Title: PALLET PROTECTOR DEVICE AND METHOD

(S7) Abstract: A pallet protector unitarily formed as a molded plastic part reinforces a wooden pallet. Its faceplate is nailed or screwed to the front and optionally the back face and side faces of the pallet. The protector has entry openings for the tines of a fork-lift and the openings are articulated into hollow collars that extend into the pallets inner regions. These collars provide a structure that accepts the weight and moment between the tines and the pallet and spread it across of the entire front of the pallet. RFID modules can also be included.
