

ABSTRACT**Handling system, related floating dock, naval platform and handling method**

The invention relates to a handling system comprising:

- a lifting gantry (16) mounted moving on a naval platform (12),
- a floating dock for placement in the water and/or recovery of an unmanned surface vehicle (20) configured to house the unmanned surface vehicle (20), the floating dock comprising, in the lower part, a cradle (18) for receiving the unmanned surface vehicle (20) and, in the upper part, a lifting spreader (22) configured to be attached to the lifting gantry (16), the lifting spreader (22) being detachable from the cradle (18).
