

ABSTRACT

A host apparatus 11, which is an estimation apparatus, includes a disposition-information storing unit 1103 that stores disposition information of a plurality of wireless terminal units, a host-apparatus processing unit 1102 that investigates, on the basis of the disposition information of the wireless terminal units stored by the disposition-information storing unit 1103, inter-concentrator-terminal connection relations between some of the wireless terminal units and the wireless concentrator and inter-terminal unit connection relations between some of the wireless terminal units, and an investigation-result storing unit 1104 that stores, as an investigation result, the inter-concentrator-terminal connection relations and the inter-terminal unit connection relations investigated by the host-apparatus processing unit 1102. The host-apparatus processing unit 1102 estimates, on the basis of the investigation result and the disposition information, connection relations between uninvestigated wireless terminal units of the wireless terminal units, the inter-terminal unit connection relation of which cannot be investigated, from the inter-terminal unit connection relations of the wireless terminal units, the investigation result of which is present, among the wireless terminal units having the same disposition relations as the disposition relations of the uninvestigated wireless terminal units.
